

# The Liberal Recycling Plan: 'New Water' Network

**Securing Sydney's safe drinking supply with water recycling and stormwater harvesting within 2 years**

The NSW Liberals are committed to a straight-forward plan to provide **86 billion litres of new, safe, clean, high quality drinking water each year.**

We will commit \$955.7 million to construct and establish a world's best quality purified water recycling system for Sydney.

This straight-forward plan includes:

\$470 million to link inland treatment plants in North Western Sydney and upgrade the North Richmond Water Filtration Plant;

\$450 million to upgrade and link inland treatment plants in South Western Sydney to Prospect Reservoir;

\$25 million for planning the recycling of ocean outfalls; and

\$10.7 million on community engagement and safeguards.

*"A plan by the NSW Opposition to use purified recycled water as part of Sydney's water supply would be a major breakthrough in providing Sydney with a secure, cost effective and environmentally sustainable supply."*

**Jeff Angel - Total Environment Centre (TEC)**

**This is the environmentally-friendly  
and economically responsible way to  
drought-proof Sydney**
